For over 10 years Ascom **QVoice** test systems have helped telecom operators worldwide keep subscribers pleased with services delivered. Be it voice only 2G through 2.5G data applications – or beyond to today's wideband multimedia 3G services – more and more mobile network operators are relying on **QVoice** to maintain quality; to optimise performance; and to benchmark competition.

In both GSM/GPRS and WCDMA technologies, Ascom has become the acknowledged leader in the innovative development of wireless testing solutions. ITU and ETSI QoS test parameters and recommendations as defined are implemented in **QVoice**.

See it yourself! Experience the live demonstrations on the Ascom stand, where new QVoice technology make accurate testing of both video streaming and video telephony possible.
